## *Smart Cities, Office and Homes*

With the evolution of technology in the market have many devices that allow us to obtain constant sensor readings and store.

The ability to intercommunicate those sensors using wireless/ethernet standard provides the ability to centralize these systems, regardless of location. If this advantage we add the ability to control systems or alarm notification, we will find true automation systems

These systems can record the data locally or remotely

*Tablet or Mobile and add any of these devices the ability of supervision and control*

In all its variants, the important thing is that we have a control system in real time, allowing us to obtain a user response and to treat it properly. Also these reports can be a certification document of quality or traceability necessary for your company

Or combine several sensors on the same graph

Do not hesitate to consult your needs, surely find a practical solution that will fit your budget
